Rabata

Test Case for Front End Developer

01

You will find 4 PDFs and corresponding assets in this folder. Please create a simple HTML/JavaScript website containing news and charts in accordance with design in PDFs. Make necessary links clickable. Make charts interactive.

02

You may find strange design in PDF and charts without the data. This is the part of the case — we are looking for a go-doer not the requirements-asker. We don't require pixel perfect HTML but we do require concise markup. Also, don't forget that some people can't see.

03

We also expect that modern clean HTML, JS and CSS will be used. Not SCSS, packagers, etc — we are living in accordance with no-build philosophy
You may use jQuery and jQuery-like frameworks (i.e. Stimulus.js) for the JavaScript part and corresponding charting libraries.

We wish you luck and productivity in your journey to become the Front End Developer at Rabata Technologies.
